

Security for: Safes - Vaults - ATM's - Cabinets - Lockers

BASE LINE SERIES OPERATING INSTRUCTIONS AND FEATURES

Our Base Line series electronic entry keypad model #EKBL-10 is available in Matte Chrome, Bright Chrome, Polished Brass, and Textured Black.

Our Rotobolt lock is model #EL-20, and is non-handed.

Functionality of our Base Line series is similar to the La Gard LGBasic® with some slight feature variations that we feel are improvements;

- a) The horizontal mounting screws offer greater stability to the input back plate.
- b) The entry keypad is vertical but the button membrane is angled upward.
- c) The battery compartment cover slides instead of pulling completely off.
- d) The battery connector cap has the wire centered to help prevent tear out.
- e) The engineered material is ABS, known for its durability, and the finish is Copper Nickel Chrome, or Copper Nickel Brass.
- f) **NEW CODE CHANGE PROCEDURE:** Press & hold the "0" key to hear a double beep, then enter the existing code once and the new (6) digit code twice. Double beep indicates acceptance.
- g) **NEW SELF DIAGNOSTIC PROCEDURE:** Press & hold the #5 key to hear a double beep, then sequentially press the #1 thru #0 keys hearing a double beep after each button press. If all signals are double beeps then the input is properly connected and communicating to the lock. This feature will help with service diagnostics when talking over the phone to a customer having any code entry issue. If receiving double beeps the issue most likely is an incorrect code entry or a safe mechanism issue but not the input or lock.
- h) **TO ADD A SECOND USER:** Press & hold key #1 until double beep and light remains on. Enter the Manager code then enter a USER's new (6) digit code twice.
- i) **TO DELETE SECOND USER:** Press & hold key #3 until double beep then enter Manager's code. Double beep indicates USER is deleted.
- j) As additional information, our input works with the La Gard LGBasic® swingbolt lock, and their Input works with our RotoBolt lock.
